Detailed Action

Response to Amendment

1. The examiner accepts the amendment to the specification, drawing and the new abstract of the disclosure filed on June 16, 2005.

Allowance

2. Claim 1 is allowed. The following is an examiner's statement of reasons for allowance:

In reference to claim 1: *Bulger* (IEEE Article, Stability Analysis of Laser Trimmed Thin Film Resistors') teaches a system for condition assessment of thin film resistors (see *Bulger*, page 172, abstract). The model component includes a fundamental laser beam profile as a Gaussian distribution (see *Bulger*, Fig. 1). Basically, this model component illustrates a predictor for predicting an expected response in the resistor model (see *Bulger*, page 172, Fig. 2). The parameter obtained from the resistor model is used in the resistor design. Finally the end of life model (EOL) is analyzed as a function of the trim ratio.

Unlike *Bulger*, the condition assessment system noted in the claimed invention is used in functional equipment setting. The virtual assessment instrument obtains data from the equipment, converts the analog data to digital.

Then a filter and predictor are applied to estimate the disturbances (the noise) and predict an expected response. The response from the model component processed and classified where a fuzzy logic expert component is used to assess the condition of the piece of equipment. The assessment is later used predict the end-of-life and condition of the equipment.

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
